DETAILED ACTION

Claim Objections

Claims 5-6 are objected to under 37 CFR 1.75(c) as being in improper form because they are multiple dependent claims. See MPEP § 608.01(n).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Noda et al. (6,146,411).

As to claims 1-5, Noda et al. disclose a catheter for topical cooling composed of a high thermal conductivity that has the inner space to circulate a heat-cooling medium therein but has no hole connecting to the outside (closed loop type, wherein it is inserted into an organ or a tissue of a mammal including a human and placed therein thereby to topical cool it selectively and continuously; wherein a cooling water or gas is circulated as a heat-cooling medium (col. 1, lines 10-42, col. 3, line 54-col. 5, line 35).

Art Unit: 3739

Further to claims 6-9, Noda et al. disclose a device comprising a reservoir, pump, heat exchanger and catheter as claimed.

Note that the claimed location or position of the catheter is merely intended use and the catheter of Noda et al. is capable of being positioned in any of the claimed locations.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Whitebrook et al. (US2003/0060864) disclose a heating/cooling system for indwelling catheters; Stull (7,077,825) discloses a method for gastric cooling using a balloon catheter; Keller et al. (6,610,083) disclose multiple lumen heat exchange catheters and each of the above anticipate claims 1-9.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roy D. Gibson whose telephone number is 571-272-4767. The examiner can normally be reached on Tu-Th, 7:30 am-4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda Dvorak can be reached on 571-272-4764. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 3739

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
